April 01, 2016)

PROJECTS

RED HOUND (October 03, 2020 - March 03, 2021)

MOBILE DEVICE TRACKING SYSTEM

- The main objective of this project is in building a software that can easily find a missing device, or for two or more people to track and find each other in a critical situation.
- With the use of their smartphones and this programme, you may easily locate folks wherever they may be. With low battery consumption, it can offer location information in real time.
- It is a best choice software for both casual well as professional usage.
- The project has been evolved using more than two technologies they are, Android, Java and Firebase database.

JOB PORTAL

JOB SEEKING PLATFORM

- The scope of the project is to develop a job portal platform where job seekers and hiring managers meet.
- It enables recruiters to post jobs as per their requirement and job seekers can apply for jobs suitable for them.
- The portal shows the latest and relevant jobs posted by recruiters on job seekers home and latest updated resumes of job seekers on recruiters home also provides alerts to both job seekers and recruiters based on customized interests.
- It also has services like posting jobs on sites, and selling resumes to recruiters.
- Technology Used : Django , AngularJS, Django Rest API, SQLite3
